SKILLS

- **Frontend**: Tkinter,JS,CSS, HTML,Streamlit
- **Backend**:Flask,Python,Textblob
- **Database**: MongoDB,Mysql
- **Languages**: Python, JavaScript,Nltk,C++
- **Tools & Other**: Git

PROJECTS

MediConsult:

- MediConsult is a health app that helps people manage their health by understanding their symptoms. It focuses on keeping users healthy and encourages them to take simple steps to improve their well-being.
- It provides clear health information, making it easier for users to make good choices about their care.

Spell Guard:

- Many individuals, including students, professionals, and writers, struggle with spelling and grammatical errors in their documents.
- To address this issue, we propose the development of a user-friendly spell checking application that leverages machine learning and natural language processing (NLP) to provide real-time spelling and grammar corrections.

Email/Sms Spam Classifier:

- It helps identify if an email or SMS message is "Spam" or "Not Spam." The app uses Natural Language Processing (NLP) techniques and a pre-trained machine learning model to give instant results.
- It has a simple and easy-to-use interface built with Streamlit, where users can enter a message and quickly see if it's spam or not.

EDUCATION

Bachelor of Technology (B.Tech): Computer Science   *Sep 2022 – Apr 2026*
Bennett University, Greater Noida, India
GPA: 8.42
